SUPPLEMENTARY INFORMATION:

Introduction

With this notice, we continue the CCP process for Red River National Wildlife Refuge. We started the process through a notice in the **Federal Register** on March 13, 2006 (71 FR 12710).

The Red River National Wildlife Refuge is a unit of the North Louisiana National Wildlife Refuge Complex. The refuge was signed into existence on October 13, 2000, with the passage of the Red River National Wildlife Refuge Act. With land acquisition, the refuge was formally established in August 2002. There are three purposes of the refuge, as stated in the Red River National Wildlife Refuge Act. These are to: (1) Provide for the restoration and conservation of native plants and animal communities on suitable sites in the Red River basin, including restoration of extirpated species; (2) provide habitat for migratory birds; and (3) provide technical assistance to private landowners in the restoration of their lands for the benefit of fish and wildlife.

According to legislation, the refuge is approved for up to approximately 50,000 acres of Federal lands and waters along that section of the Red River between Colfax, Louisiana, and the Arkansas State line, a distance of approximately 120 miles. The refuge growth will be strategically planned within five focus areas that will each have a management unit of the Red River National Wildlife Refuge. These focus areas are: Lower Cane River (Natchitoches Parish); Spanish Lake Lowlands (Natchitoches Parish); Bayou Pierre Floodplain (Desoto and Red River

Parishes); Headquarters Site (Bossier Parish); and Wardview (Caddo Parish).

Currently, the Service has acquired 9,787 acres, with 40,213 acres remaining to be purchased. The lands within the five areas will be acquired through a combination of fee title purchases from willing sellers and conservation easements, leases, and/or cooperative agreements from willing landowners. Currently, fee title lands have been purchased within portions of all the focus areas, with the exception of Wardview.

Historically, the Red River Valley was forested with bottomland hardwoods, cypress sloughs, and shrub swamps; however, for the last three decades, the Red River Valley has been utilized extensively for agricultural production, and, as a result, has lost almost all of its forest cover. The river itself was very turbid, and its wildlife and fishery habitat was poor compared to other parts of the State. After completion of the Red River Waterway Project in 1994, water levels in the river became higher and more constant, greatly reducing its turbidity. Water quality improved and with seasonal retention of water levels, a rich diversity of aquatic flora and fauna has developed.

Increased water levels on the river also improved some adjacent habitats. Flooded timber and farm fields with wet depressions are now common, providing habitat for migratory birds. The refuge has been involved in several reforestation projects and has improved moist-soil habitat. With management of this refuge in its infancy, the planning process will define priorities for current and future refuge resources and management.

Wildlife species found on the refuge are typical of forested wetlands and fields. The Red River is a historic migration corridor for migratory birds
