Kansas City, Kansas

The Healthy Homes Network, in collaboration with Children's Mercy Hospital, Baker Environmental Consulting, Metropolitan Energy Center, Service Master, Kansas City Health Department and Air Care Technologies, will provide extensive in-home education and low-cost remediation to 200 families with critically ill children in the Bi-State Kansas City Enhanced Enterprise Community in Kansas City, Missouri and Kansas City, Kansas. Residences will undergo healthy homes interventions for environmental hazards including lead, allergens, chemical and physical hazards. The project will demonstrate low-cost, replicable remediation strategies and facilitate a Resource Center to provide supplies and training to the families.
