

FY 02 Healthy Homes Demonstration and Lead Studies Technical Grantees

Coalition to End Childhood Lead Poisoning

2714 Hudson Street

Baltimore, Maryland 21224

Amount of Award: \$872,032

Contact: Ruth Ann Norton

(410) 534-6447

Baltimore, Maryland

The Coalition to End Childhood Lead Poisoning will collaborate with Baltimore City Healthy Start, the Baltimore City Health Department, Clearing House for Healthy Communities, Harlem Park/Lafayette Square Village Center, the Enterprise Foundation, the Johns Hopkins School of Nursing, New Song Urban Ministries, the NAACP, the Wald Clinic, the American Red Cross, Casey Family Services and Success by 6 to provide assessment, education and interventions in 200 homes occupied by pregnant women and young children. The goal of the project is to address housing-related health and safety hazards prior to the birth of a new child in the communities of Sandtown-Winchester/Harlem Park and Historic East Baltimore South.

National Center for Healthy Housing

10227 Wincopin Circle, Suite 100

Columbia, MD 21044

(Howard County)

Amount of Award: \$60,804

Contact: Johnathan Wilson

(410) 772-2784

Howard County, Maryland

The National Center for Healthy Housing and the University of Cincinnati are collaborating to examine the relationships between the levels of lead in floor-dust in “common areas” of multifamily residential buildings and the floor dust lead loadings in associated dwelling units. The researchers will also assess the effects of lead hazard control treatments in common areas on the floor dust lead levels in dwelling units in the same buildings. The major objectives of the study are to better explain the value of treating common areas as well as identify the intensity of lead-based paint interventions that most effectively control lead-based paint hazards in residential common areas. A series of statistical analyses using previously collected data will be conducted.
